Oleksii Khilkevych

Senior Platform Engineer

(+49) 163 166 96 87 | oleksiy@noroutine.me | github.com/noroutine | in/oleksiikhilkevych | Munich, DE

Looking for Platform/SRE/SWE/Lead/x-functional position in great team where initiative can make a real difference

Summary

Platform Engineer, SRE, DevSecOps with 10+ years designing and maintaining high-availability infrastructures with 99.9%+ uptime across cloud and on-premises environments and 20+ years of Dev experience, in contributor, manager and leadership roles. Specialized in Kubernetes, IaC automation, and observability. Proven track record managing 50+ production environments with focus on SLA/SLO compliance and incident response, postmortems and blameless culture. Experienced in driving platform reliability initiatives, mentoring teams and leading automation efforts across hybrid cloud environments and multiple teams.
Self-driven and pragmatic problem-solver with passion for business, people and technology.

Programming Languages

My daily pragmatic pick: Go, Python and bash. I practice TDD and mutation testing.
Comfortable also with projects in: TypeScript · Java, Kotlin, Groovy

Experience

Senior Platform Engineer Celonis 06/2026 - Present

Celonis tought me how inefficiencies are turned into recovered value

- Identified through data analysis the potential for Azure Storage Account cost recovery of ~$40k/yr
- Gamified Teleport request approval process for the team, recovering value of ~800 blocked working hours annually for users
- Wrote a focused Teleport request helper TUI in Go to improve developer experience, address process frictions and reduce errors
- Performed PostgreSQL major-version upgrades across AWS Aurora/RDS, Azure Flex fleet
- Managed cloud services on AWS and Azure, ensuring optimal performance and scalability.
- Addressed good amount of infrastructure drift from backlog, improving service reliability
- Upgraded toolchain in one of core k8s operators across several major Go versions

Platform Engineer (SysOps) DE-CIX 09/2024 - 12/2025

DE-CIX was a fantastic opportunity to work in one of the major IXs in the world

- rewrote account sync tool from Active Directory (AD) to OpenLDAP in modern Python
- developed DNS zone analysis tool for complicated BIND configs in Python
- implemented Terraform PoC as part of wider Proxmox PoC
- managed DNS, Azure, contributed to IaC, monitoring and automation
- incident response and troubleshooting of multi-site global Internet Exchange (IX) setup, 24x7 on-call rotation

Platform Engineer (Big Data) Allianz 10/2019 - 12/2023

Allianz gave me a stereo-perspective on big data and data anlytics

- collaborated with several teams to migrate 50+ Big Data environments to Azure/AKS Cloud Infrastructure
- wrote NFS and LDAP metrics exporters in Go for Prometheus as per custom requirement
- maintained custom-branded BinderHub fork with internal extras and patches (Python)
- designed and implemented multi-tenant highly-available containerized monitoring solution for 50+ Allianz OE Big Data Analytics environments with alerting and long-term storage running on Nomad and later Azure
- was go-to person for several key areas, like ElasticSearch, JupyterHub, BinderHub, Development PoCs
- SLA/SLO management, incident response, troubleshooting and 24x7 on-call rotation
- proactively prepared the team for COVID lockdown

Principal DevOps Engineer ACI Worldwide / PAY.ON 09/2015 - 10/2019

PAY.ON and ACI taught me the true cost of downtime and what nines really are

- built and mentored DevOps team from 0 to 1, put all my heart into people, tooling and culture
- reduced release cycle, and increased releases frequency from per week to multiple times a day
- implemented DR tooling in Go for payment platform (with >300 tps) with automatic traffic failovers and DR exercises, saved $200k first week it was deployed, also wrote UltraDNS/Pingdom management CLI in Go
- modernized ancient tech stack to Git, Gradle, Jenkins
- was driving weekly code retreats and PoCs on k8s, containerization, virtualization, automation, hackathons, Git, Ansible, Docker Swarm, and more

Consultant & Founder Noroutine 09/2018 - Present

Noroutine is a lab of my hearts desires most of the time, and the rest of the time it is mostly a technology consulting. It gave me business mindset and stereo view on solving businesses daily challenges

- implemented custom OpenID Connect provider with some extra extensions, WebAuthN support and off-device login flow (TypeScript/Fastify)
- implemented cloud service interconnect with TCP-over-HTTP (custom WebSocket-like protocol, core idea is similar to frp reverse proxy but with a lot of extra sauce)
- implemented cloud MTA for special mail processing and archiving
- implemented cross-platform service discovery mechanism for clients with limited DNS capabilities
- many interesting projects (LIR, anycast DNS, IoT, CDN, grey noise detection, eBPF, if to recall few spotlights)
- built complete infrastructure from 0 to 1 (baremetal servers with proxmox + vms and few k8s clusters on top), everything automated with stacks of multiple tools
- implemented GDPR compliance and processes
- mentored three junior recruiters in GDPR and tech

Education

Igor Sikorsky Kyiv Polytechnic Institute Kyiv Ukraine

MS in Computer Science (Systems Analysis) 2003 - 2009

Hard Skills

- **Languages:** Go, Python, Rust, TypeScript, JavaScript, Java, Kotlin, Bash, SQL
- **Cloud & Platforms:** AWS, Azure, EKS, AKS, Kubernetes, Docker, Helm, Kustomize, FinOps / cost optimization
- **Infrastructure as Code:** Crossplane, Terraform, Atlantis, Ansible, Packer, GitOps, pyinfra
- **Observability & Monitoring:** DataDog, Prometheus, Grafana, ELK Stack, Jaeger, OpenTelemetry, InfluxDB
- **Message Queues:** Kafka, RabbitMQ, NATS
- **Big Data & ML:** Spark, Airflow, Jupyter, vLLM, RAG, vector embeddings, CUDA
- **CI/CD & DevOps:** GitHub Actions, GitLab CI, Jenkins, Kargo, ArgoCD, Harbor, Nexus, Artifactory
- **Databases:** AWS RDS/Aurora, Azure Flex, PostgreSQL, Redis, MongoDB, ElasticSearch, ClickHouse, Ceph, MinIO, lmdb
- **Datastores:** AWS S3, EBS, EFS, Azure Storage Accounts
- **Networking:** BGP, OSPF, VLAN, VxLAN, DNS (PowerDNS, BIND), TCP/IP, IPSec, Wireguard, SD-WAN
- **Hypervisors:** Proxmox, VMware
- **Security & Identity:** OAuth/OpenID, LDAP, mTLS, HashiCorp Vault, PKI/TLS, FreeIPA, Active Directory
- **Programming**: TDD, hexagonal architecture, mutation testing
- **Human Languages:** English (fluent), German (B2), Ukrainian (native)

Certifications & Training

- Kubernetes (self-certified via managing 5+ clusters the hard-way for a decade, exam-ready for CKA and CKAD)
- Infrastructure as Code (Terraform, Ansible, extensive production use)
- Site Reliability Engineering (Google SRE principles, production implementation)
- TOEFL (score 105)

Selected Projects

- **kpr** - fills the gap between registry:3 and being useful, https://kpr.nrtn.io/
- **maglev** - Maglev-based DSR loadbalancing setup, https://nrtn.dev/catalyst/maglev
- **infra-setup** - how I build my infra, https://nrtn.dev/catalyst/infra-setup
- **rustlings-ua** - translation of Rustlings to Ukrainian, https://rustlings.rust-lang.org/community-exercises/
- **Lane IdP** - IdP by spec with service discovery, WebAuthN, custom off-device auth flow support
- **Nail** - secure global service/app interconnect on top of HTTP with websocket-alike protocol upgrade
- **Shovel MX** - Mail Transfer Agent (MTA) that delivers to Microsoft 365, Google Workspace and local archive, https://shovel.mx/
- **Scribe** - MJML template microservice
- **tripwire** - port-scan/DDoS internet radar
- **dnsconfig** - custom dns server to use DNS as distributed KV store
- **terraform-eui64** - EUI64 calculator as per RFC4291, https://github.com/noroutine/terraform-eui64

Prior Experience omitted: 13 years fullstack development (Java, web technologies) across various consulting engagements (2002-2015)
